

OPURA™

Advance Laundry Equipment (patent pending) has developed a complete laundry solution which delivers the ultimate in infection control, energy efficiency and laundry quality.

How it works

By combining ozone generation, unique washer extractor technology, and the highest quality commercial laundry detergents and ensuring all three elements work in harmony, Opura guarantees the best wash results, with terminal fabric disinfection and huge quantifiable energy savings.

Benefit 1

Energy Savings and Improving Environmental Credentials

Opura also delivers huge savings in energy, water and chemical consumption. In fact, 'live' trials on two 16.5kg washers conducted in partnership with Barchester Healthcare over 12 weeks showed annual savings of £5,690 per home per year!

Benefit 2

Proven Super Bug Disinfection

Industry tests by CCFRA prove that Opura™ achieves industry leading bug reduction, producing greater than 5 log on Escherichia Coli, MRSA and Clostridium Difficile spores as tested using EN ISO 1498-1:2003 protocol.

Benefit 3

Superior Wash Quality

Objective testing and anecdotal evidence from current users shows Opura produces whiter whites and softer, fluffier, fresher smelling laundry. By eradicating the need for strong bleaching agents for traditional stain removal and by washing at lower temperatures, it keeps colours brighter for longer and extends the lifetime of fabrics. The low temperature disinfection also means delicate personal fabrics can be disinfected to a higher standard without the risk of the damage caused by traditional thermal washes.

Advance Laundry Equipment's revolutionary ozone based laundry system is available to purchase or on a contract hire basis. To find out more call 0800 597 7427 or visit www.advancegroupuk.co.uk

About The Advance Laundry Equipment Partners

Developed in close cooperation with Ozone-Direct, Opura represents the unique expression of over 20 years direct experience in design, manufacture and support of specialist ozone systems and a wealth of applications know-how accumulated by Ozone-Direct.

Grandimpianti has almost thirty years of experience in providing a complete range of washing, drying and ironing appliances to small and medium industrial laundries. All appliances comply with "CE" standards and are designed to deliver the best ergonomic solution whilst reducing energy consumption and safeguarding the environment.

RP Adam manufacture the **Brilliant Liquid Laundry** range of commercial laundry detergents. Known for high quality formulations, they strive to be seen as the outstanding provider of service in the industry. With over 25 field Customer Services personnel and a nationwide chemical dosing engineering team, they specialise in the installation of liquid laundry detergent dosing systems and frequent site visits to ensure the Advance Laundry Equipment offering is being delivered.

"The level of disinfection shown was very impressive and significantly better than with traditional washes. The savings shown in both chemicals and utilities were also significant."

Bill Wilson

Property Director
Barchester Healthcare

"We had previously purchased two Ozone systems from another supplier and despite promises that the system would fund it self and deliver a superior bug kill to our traditional processes we were unable to substantiate either.

With Opura we are seeing real operational energy and detergent savings combined with an improvement in wash quality that is evident to our clients and staff alike."

Neil Duce
